

Recycle with Circular11

We can only recycle certain plastic types so please make sure you only send the numbers listed above. These can normally be found on the material, but if you're not sure, check overleaf for examples.

We ensure that 100% of your plastic is recycled by turning it into a valuable product that will last a lifetime and get recycled again at the end of it.

HOW TO RECYCLE WITH US:

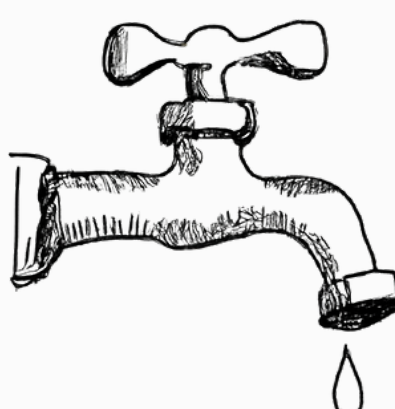

Step 1: Check It

Check you have the right plastic types and make sure it is free from any contamination, like metals, foils and labels.

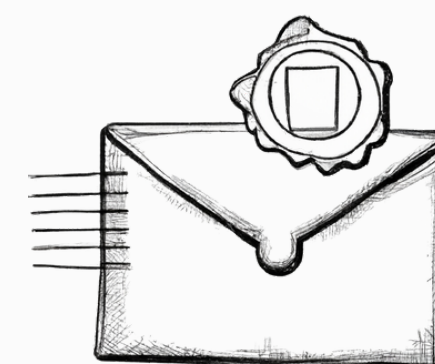

Step 2: Clean It

Plastic needs to be free of food, dirt and other contaminants before we can give it a new life.

Step 3: Send It

Box it, bag it, or carry it to one of our two collection sites. See overleaf for collection site addresses.

Yoghurt Pots

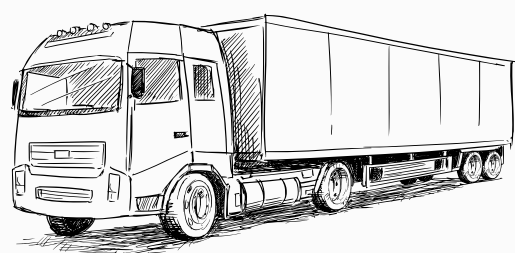

PS - 6

DVD /Video Cases
Takeaway Cup Lids
Disposable Cutlery
Plant Trays

We believe that everyone should know what happens to their waste. We use patented technology to give value to the hard stuff: To Mixed streams, and commercial and household waste that no-one else can use. And we turn them into something that looks like timber, except:

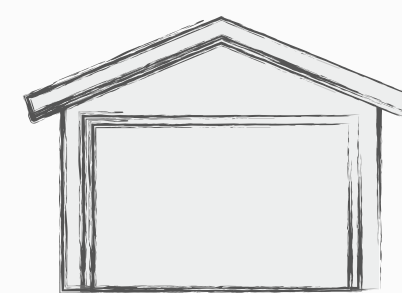

They don't rot
They don't splinter
They don't need maintenance

And if, after decades of use you no longer need them, we'll collect and recycle them into something new. This isn't a temporary solution; this is a new way of thinking about plastic.
